Correction to “The Effects of Inter-Symbol Interference in Dynamic Element Matching DACs”

Jason Remple and Ian Galton

The authors made an error when stating that the $\lambda_i[n]$ sequences are usually uncorrelated with each other in [1]. To correct this error, Equation (12) and the sentence above it in [1] should be replaced with:

In Nyquist-rate DACs the DEM encoder usually is designed to ensure that the $\lambda_i[n]$ sequences well approximate zero-mean, white, random sequences that are uncorrelated with $x[n]$, i.e.,

$$
\begin{align*}
\mathbb{E}\{\lambda_i[n]\} &= 0 \\
\mathbb{E}\{\lambda_i[n]\lambda_i[m]\} &= 0 \text{ for } m \neq n
\end{align*}
$$

regardless of $x[n]$ (12)

All other equations, deductions, and results in the paper are valid despite the error. The authors apologize for any confusion their mistake may have caused.
